

Key:

● High Risk Area

● Moderate Risk Area

● Low Risk Area

What you need to know

This address is in a location at low risk for flooding.

A property in this area is less likely to be flooded than properties in other locations are, but flooding is still possible.

How is this calculated?

Low risk does not equal no risk.

Every home is at some risk for flooding. Flooding events have occurred in all 50 states and in 98 percent of U.S. counties. For example, more than half of the Houston-area homes damaged by flooding from Hurricane Harvey in 2017 were in low-risk areas.

In recent years, the United States has experienced several 1,000-year flood events, which is why it is important to be prepared and insured for current and future flood risk.

Flood risk is rising

Flooding is the country's most common natural disaster. By some measures, 7 out of every 10 natural disasters in the U.S. are flood-related.

The Heartland is experiencing more and heavier rainstorms. That increases the chances for flooding.

Prepare your home and family.

In a major storm, you might lose power and clean water. Roads may close. Create a shelter-in-place kit. You can use its contents to stay safe and comfortable until power is restored or help arrives.

Protect your home from flooding.

What you can do

There are many low-cost steps you can take to prevent or reduce flood damage. Other steps will help you recover more quickly after a flood. Many of the projects can be completed in a day. For example, you can:

- Install downspout extenders.
- Seal cracks in foundation walls.
- Collect and safely store important documents.
